TITLE : CAMERA CAPABLE OF  
SUPERIMPOSING DISPLAY

ABSTRACT : PURPOSE: To observe a picture picked-up already and a picture going to be picked-up from now simultaneously through a finder.

CONSTITUTION: A picture going to be picked up from now is formed on a focusing plate 13 via an image pickup lens 11 and a half mirror 12. A picture already picked-up is read from a picture memory 25 and displayed on a liquid crystal display device 16 through a processing circuit 22. The picture on the focusing plate 13 and the picture on the liquid crystal display device 16 are simultaneously observed from an eyepiece 15 and the pictures are observed while being synthesized.
